

YIELD REPORTS

Accepted by all banks and investors

Reliable forecasts require consideration of all parameters. As the market leader in remote monitoring of PV systems, meteocontrol GmbH can draw on a wealth of measurement values and experience from projects with 9 billion euros in total volume. This provides the foundation for dependable yield reports accepted by all banks and investors.

SOLAR'YIELD REPORT PROFI

Comprehensive yield calculation of a PV system:

- Solid basis for bank financing commitments
- Determination of the long-term energy yield of your PV system at a specific site based on highly precise, Europe-wide weather and irradiance data
- Optional: On-site analysis to evaluate shading conditions

Furthermore, meteocontrol GmbH provides you with professional and independent support during all phases of your PV project.

- Vendor audits
- Yield reports and Technical Due Diligence
- Quality assurance during system construction
- Technical acceptance and certification
- System monitoring
- Technical operation management

ADDITIONAL REPORTS

Solar'Yield Report Premium

Comprehensive assessment of PV systems and solar parks:

- Reliable evaluation of solar park yield potential
- Minimizing risks for investors
- Detailed analyses for designers wishing to apply innovative and new technology
- Developing models for calculating new components and performance of reference systems

Expert Opinion

Eliminates any doubt regarding power of existing PV systems:

- Analysis of minor yields
- Objective investigation of causes
- Support and evidence provided in the event of legal disputes
