

SAFER'SUN PUBLIC

A rapid overview of your system's performance

FUNCTIONAL DESCRIPCION

The Home Line data loggers collect system data and transmit them to the meteocontrol servers. Yield data and your own contribution to environmental protection are shown via the Internet-supported safer'Sun Public web portal. Thanks to a central database, the system's yield can be compared with other PV systems in the region. Based on the precise recording, preparation and analysis of the yield data, the system determines a performance rating and therefore enables evaluation of the installations.

We provide additional functions for our partners. You can adjust the colours and the logo yourself. Optionally, we can create a view that is matched to your company's corporate identity.

FEATURES

- Modern, appealing presentation of yield and environment information
- Performance evaluation for fast yield check
- Public access, no login required
- Integration into public websites and social networks possible
- Compatible with inverters of all leading manufacturers

YOUR BENEFITS

- Transparent preparation of information and clear statements on system capacity
- System image conveyed with integration into public websites and social networks
- Easy layout adjustment for you as our partner
- Extensive individualization possible if required
